Project EPSILON (Project number: 2021-1-DE01-KA220-HED-000029711) addresses the needs of both European Data for Good initiatives and HE institutions. Together with a leading European initiative, Data Science for Social Good Portugal, we will design tailored workflows and tools for European initiatives.

We will set up a European Knowledge Platform and initiate a new Data for Good initiative in Lithuania. The gained experience and knowledge will be transformed into target group specific learning material for higher education students, teachers, and alumni. Project design and intended outputs clearly align with the long-term education goals of the European Union.

European Platform for Data Science: Incubation, Learning, Operations and Network

PR1: European Data for Good Needs Analysis

I:	Initial analysis
II:	Stakeholder interviews
III:	Focus Groups
IV:	Creation of Workflows

PR2: Knowledge Platform and BI Toolkit

I:	Gathering user requirements and needs
II:	Elaborating the specifications
III:	Designing the architecture & software components
IV:	Developing and launching the platform
V:	Testing, evaluating, and updating the platform and tools

PR3: New Data for Good Initiative

I:	Develop an action plan for building a regional initiative
II:	Meet with regional stakeholders
III:	Train the volunteers
IV:	Start an initial project
V:	Develop measures for sustainability
VI:	Provide a full report

PR4: Teaching and Training Material

I:	Understand the target group
II:	Create drafts of teaching material
III:	Test with different peers
IV:	Amend the learning material
V:	Apply at LLTA 2
VI:	Finalize the learning material

Co-funded by the European Union
