

Info & Networking EVENT

Harz University of Applied Science
DECEMBER 18, 2024

AGENDA

1. Data Science for Good
2. Introduction to the EPSILON Project
3. Project Result 1: European Data for Good Needs Analysis
4. Project Result 2: Knowledge Platform and Business Intelligence Toolkit
5. Project Result 3: New Data for Good Initiative in Lithuania
6. Project Result 4: Teaching & Training Material
7. Presentation CorrelAid
8. Discussion and Conclusion

What is Data Science for Good?

- Use of Data Science Methodologies to address and solve Societal Challenges
- **Key Areas of Application:**
 - Public Health & Social Services
 - Education
 - Environment
- **Benefits:**
 - Empowers organizations with evidence-based decision-making
 - Promotes transparency and accountability in addressing social issues
 - Fosters collaborations between data scientists, NGOs, and governments
- **Challenges:**
 - Ensuring data privacy and ethical use of data.
 - Overcoming resource constraints in non-profit sectors.
 - Bridging the gap between technical experts and domain-specific stakeholders.

Introduction to the EPSILON Project

The transnational project EPSILON with partners from Germany, Portugal, Cyprus and Lithuania addresses the needs of European Data for Good initiatives and higher education institutions with degrees in Data Science as well as NGO's/NPO's.

Project Result 1: Overview & Objectives

- **Title:** Needs Assessment and Best Practices for Data for Good Initiatives in Europe
- **Overview:**
 - Assessment of the needs and challenges of stakeholders in the Data for Good field across Europe, focusing on creating resources and establishing best practices
- **Objectives:**
 - Compilation of a database of current European Data for Good initiatives
 - Workflows for best practices in volunteer organizations
 - Analysis of target groups to identify essential processes for Data for Good associations

Project Result 1: Methodology and Key Tasks

- **Task 1: State of the Art**
 - literature research on existing European initiatives and projects
- **Task 2: Stakeholder Interviews**
 - Assessment of the challenges and needs
- **Task 3: Focus Groups**
 - insights and opinions on best practices and needs
- **Task 4: Workflow Creation**
 - standardized workflows for volunteer, sponsor, and institution management, as well as for project development and communication

Project Result 1: Impact and Transferability

- **Innovation:** Bridges the gap in European resources on best practices for Data for Good associations through collaboration with educational and social impact entities
- **Impact:** Supports further project outputs, including the prototyping of BI tools, launching new initiatives, and developing educational materials
- **Transferability:** Enables application of identified processes and solutions in future project phases and external initiatives, promoting broader adaptation across various regions and organizations

University of Cyprus

Project Result 2: Project Overview

- **Title:** Creating a Digital Environment for Data Science Volunteers
- **Objective:**
 - Develop a digital environment to support the work of data science volunteers & social organizations
- **Key Deliverables:**
 - An open-access, sustainable, interactive European Knowledge Platform
 - A Business Intelligence (BI) Toolkit for data storage, synthesis, and presentation.

Project Result 2: Needs Analysis and Innovation

- **Needs Analysis:**
 - Conducted during the first project phase
 - Requirement gathering from stakeholders via questionnaires as needed
- **Target Groups:** Higher education students, staff, and alumni
- **Innovation:**
 - Developing new functionalities based on unmet needs
 - Implementation Process: 1. Gather user requirements. 2. Elaborate specifications, including GDPR privacy requirements. 3. Design system architecture and components. 4. Develop the platform and BI toolkit.

Project Result 2: Impact and Transferability

- **Expected Impact:**

- Integration of project results meeting stakeholder needs
- Accessible platform supporting "Data for Good"
- Sustainable resource offering free, open access information and training material

- **Transferability Potential:**

- Usable by volunteer data scientists across various contexts
- Accessible materials and tools available anytime, anywhere

- **Evaluation:**

- Testing and feedback process with consortium members and external stakeholders

Project Result 3: New Data for Good Initiative in Vilnius University, Lithuania

- Core team:
- Dalia Krikščiūnienė
- Virgilijus Sakalauskas
- Giedrius Romeika

Vilnius university
Kaunas Faculty
LITHUANIA

Project Result 3: Action Plan and Sustainability Measures

- **Action Plan:**

1. Develop a regional initiative action plan
2. Engage regional stakeholders
3. Recruit volunteers - Utilizing VU's network and other HE institutions.
4. Training: Using resources and materials from previous project results.
5. Initial Project Launch: Select and support an institution.
6. **Sustainability:** - Develop a sustainability action plan
7. Integrate into the European 'Data for Good' ecosystem.

Project Result 3: Data science laboratory

The Data science laboratory is established as a hub for engaging data science professionals, students, experts to join volunteer network :

Date of establishment: 02/02/2024

RESOLUTION

ON THE ESTABLISHMENT OF THE SCIENTIFIC AND APPLIED RESEARCH LABORATORY
"DATA SCIENCE LABORATORY" (LITH. TITLE: „DUOMENŲ MOKSLO LABORATORIJA“) AT THE
INSTITUTE OF SOCIAL SCIENCES AND APPLIED INFORMATICS OF THE KAUNAS FACULTY
OF THE VILNIUS UNIVERSITY

In accordance with the regulations of the Kaunas Faculty of Vilnius University, approved by the resolution of the Senate of Vilnius University in October 18, 2016. No. S-2016-9-2 "Regarding ratification of Kaunas faculty regulations" (Amended edition of resolution No. S-2018-5-8 of Vilnius University Senate dated May 22, 2018), clause 22.11, Vilnius University Kaunas Faculty Board makes a resolution:

1. To establish a scientific and applied research laboratory "Data Science Laboratory" at the Institute of Social Sciences and Applied Informatics of the Kaunas Faculty of Vilnius University, which does not have the rights of an administrative unit;
2. Assign prof. Dr. Dalia Krikščiūnienė a supervisor of the "Data Science Laboratory".

Chair of the Faculty Board

Conceptual Framework of Data Science for Good Squad

Dalia Kriksciuniene, Virgilijus Sakalauskas, Giedrius Romeika
Vilnius University
dalia.kriksciuniene@inf.vu.lt

The idea of the research is based on the EU initiative «Data science for goods (DS4G), which aims to effectively use data collected by public organizations due to digital transformation of society. These data are related to health, education, legal environment and security, development of labour resources, energy, transport, sustainability, climate change problems, and other solutions.

The DS4G concept tackles the problem of how to help public organizations not only to collect but also to extract useful information from data, allowing them to make decisions useful to the society. The use of data is complicated not only due to the abundance of collected data but also due to their different sources, collection formats, insufficient data «cleanliness», and the lack of specialists in IT, data science and analytics.

The efforts to bring together specialist communities and solve the data analytics problems raised by the DS4G initiative are already being made. Leading companies in the field of technology, such as Facebook, Google, and Amazon are becoming more and more actively involved in solving these issues.

The objective of the research is to propose the conceptual framework to create an innovative data science hub model (Data for Good squad), which would ensure the creation of effective workflows of operational processes, preparation of training materials, methodologies for identifying company problems and needs, management of risk and sustainability factors, and a building a relevant network of data science specialists. To implement this idea, volunteer teams of specialists in the field of data science and analytics are being assembled.

The research is inspired by the international EU project EPSILON «European Platform for Data Science: Incubation, Learning, Operations and Networks». Project coordinator – Harz University (Germany), Nova SBE Institute of Science, Business and Economics (Portugal), University of Cyprus (Cyprus), Vilnius University (Lithuania).

Conceptual framework of Data Science for Good Squad

Dalia Kriksciuniene, Virgilijus Sakalauskas, Giedrius Romeika
Vilnius University

Abstract

The idea of the research is based on the EU initiative "Data science for good" (DS4G), which aims to effectively use data collected by public organizations due to digital transformation of society. These data are related to health, education, legal environment and security, development of labour resources, energy, transport, sustainability, climate change problems, and other solutions.

The objective of the research is to propose the conceptual framework to create an innovative data science hub model (Data for Good squad), which would ensure the creation of effective workflows of operational processes, preparation of training materials, methodologies for identifying company problems and needs, management of risk and sustainability factors, and a building a relevant network of data science specialists. To implement this idea, volunteer teams of specialists in the field of data science and analytics are being assembled.

Project settings

Current situation	Target state	Our tasks
Data Science for Social Goods initiatives exist all over Europe. Teams are organized as regional initiatives all over Europe. Every Platform/Team comprises qualified volunteers (academic and professional Experts in the field of Data Science).	Regional Teams have access to standardized and efficient work flows to ensure adequate organization and on-boarding of new volunteers. Regional Teams have access to relevant Business Intelligence tools (i.e. Dash Boards) to ensure sufficient controlling and monitoring of projects and resources.	Conduct expert interviews with regional initiatives to explore and refine relevant work flows and best practices. Conduct workshops to develop a Regional Platforms Blueprint.
Experts partner for the way forward to support regional Non-Profit organizations in the process of Digital transformation.	European countries without existing initiatives are identified. Regional teams get access to relevant information and are enrolled to initiate regional squads.	Developing standardized Business Intelligence Dashboards.
Heterogeneous stakeholders across Countries and regions. Teams are formed on individual initiatives.		Build a knowledge management Platform. Plan and initiate a regional squad in a less-developed region.

Overall Vision

Deliverables: Standardized Business Intelligence Solutions for DS4G Squad model

Following an agile approach, we explore the existing practices and requirements to clearly define user groups, BI needs, and additional requirements including data protection, compliance, and security. Subsequently, we refine research workflows and continue to implement and run managed analytics projects.

Project EPSILON

Project Result 3: Initial Project Launch- Select and support an institution

The list of social organizations in the State Tax Inspection was analysed: [Paramos statistika - VMI](#) - (The total number 22504 registered non-profit organizations in LT)

The social organizations with established interest for partnership DS4G initiative at the Data science laboratory:

- 1.Public institution Viešoji įstaiga VŠĮ „PENKTA KOJA“ (registration code 301536790)**
- 2.Public institution Viešoji įstaiga Mixed voice choir LELIUMAI (registration code 193262535)**
- 3.Public institution Prienai-Birstonas diabetes club VERSME (Viešoji įstaiga Prienų-Birštono diabeto klubas „Versmė“) (registration code 190161189)**

Project Result 3: Initial Project Launch Pilot organization

Public institution „PENKTA KOJA“ was selected as the PILOT project
It was contacted via alumni and social partner network of Vilnius:

web: [Šunų prieglauda - Penkta koja](http://www.penkta-koja.lt)

Project Result 3: Pilot activity plan

DS4G project 1: Identification of the Data science project scope of 'Penkta koja' non-profit organization, project task definition, volunteer teams, roles

DS4G project 2 : The processing, cleansing procedures of the dog data and its analysis and visualization

DS4G project 3: Online advertising (Google Ads) project: creating advertising content, ads for paid advertising, based on the analysis of the data during project 1.

DS4G project 4: Image recognition project by applying machine learning methods in Python environment

DS4G project 5: Dog data transformation for data analysis, Statistica-Tibco tools

Project Result 3: Pilot activity

DS4G project 2: The analysis of the dog data

• Data source, processing, analysis

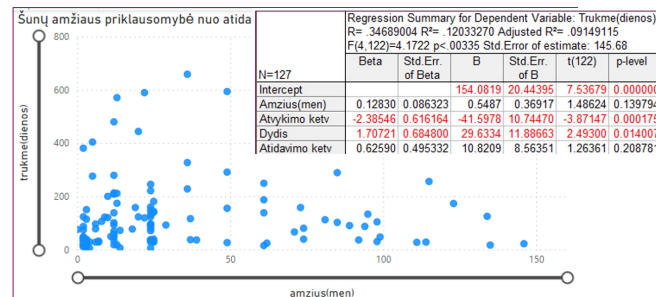

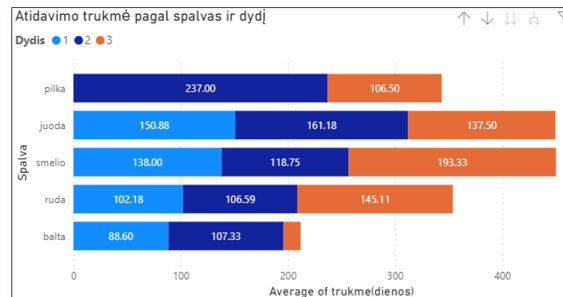

We have added 8 attributes to our initial data:

- Days in private animal shelter
- Dog age in month
- Arrival month
- Arrival quarter
- Release month
- Release quarter
- Dog color
- Dog size

Project Result 3: Pilot activity

DS4G project 3: Online advertising analysis

- 1) The project teams defined (total 7 student teams)
- 2) The registration in the Google Ads environment, certifications
- 3) The keyword and search term databases created, analysed
- 4) Google Ads campaigns and the ads database created, indicators analysed
- 5) The campaigns and ads quality evaluated
- 6) The online campaign result analysis
- 7) Presentation and report to the content marketing and data analysis experts

Project Result 3: Pilot activity

DS4G project 4: Image recognition by ML

Dog Recognition System

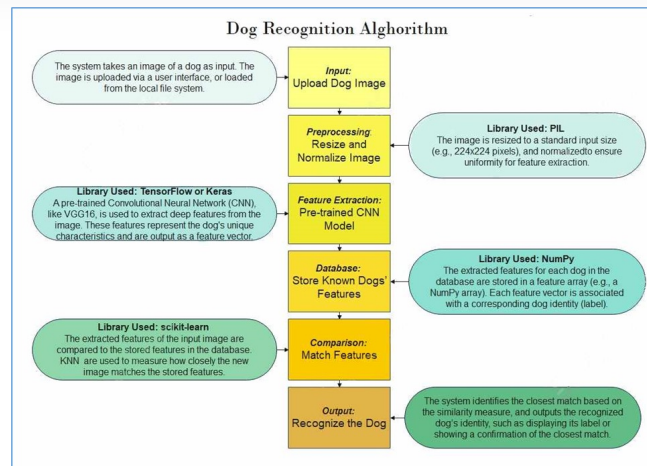

The aim of this project is to identify and take care of homeless or lost dogs who may have been hosted by dog shelter "Pekta koja" and are photographed and registered there. The idea of the project is to try to identify a lost dog based on a database of dog photos in "Penkta koja" shelter.

Goal

To identify a lost dog based on a database of dog photos.

Method

Leverage computer vision and machine learning to create a model that can compare a new dog's photo with the photos in the existing database and recognize the dog.

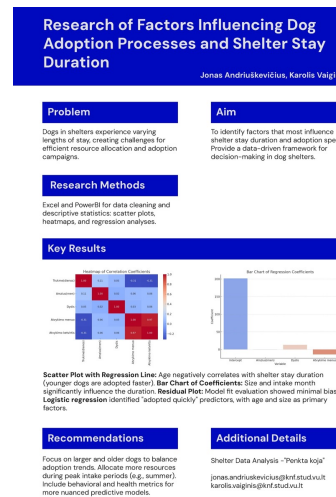

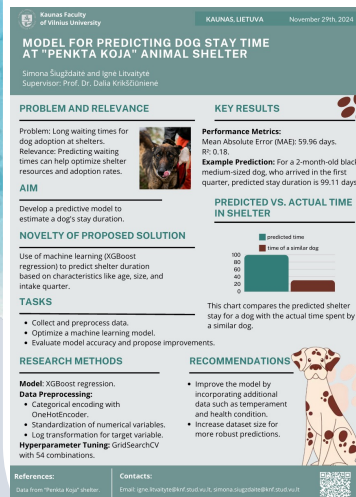

Python code (fragment)

```
57 # Extract features from the database images and get the labels and image paths
58 database_features, labels, image_paths = load_database(database_path)
59
60 # Train a KNN classifier using the extracted features
61 knn = KNeighborsClassifier(n_neighbors=1)
62 knn.fit(database_features, labels)
63
64 distance_threshold = 500
65
66 # Function to recognize a new dog from an image
67 def recognize_dog(new_image_path):
68     # Extract features from the new image
69     new_features = extract_features(new_image_path)
70
71     # Predict the closest dog from the database
72     recognized_dog = knn.predict([new_features])
73
74     # Find the corresponding image path for the recognized dog
75     index = knn.kneighbors([new_features], n_neighbors=1, return_distance=False)[0][0]
76     distances, indices = knn.kneighbors([new_features], n_neighbors=1, return_distance=True)
77     nearest_distance = distances[0][0]
78
79     if nearest_distance < distance_threshold:
80         # If the nearest distance is below the threshold, recognize the dog
81         recognized_dog = knn.predict([new_features])[0]
82         recognized_dog_image_path = image_paths[indices[0][0]]
83         return recognized_dog, recognized_dog_image_path, nearest_distance
84     else:
85         # If the nearest distance exceeds the threshold, return "Unknown Dog"
86         return "Unknown Dog", None, nearest_distance
87
88 # Function to show the recognized dog's image
89 def show_image(image_path, title):
90     if image_path:
91         img = Image.open(image_path)
92         plt.imshow(img)
93         plt.title(title)
94         plt.axis('off') # Hide the axes
95         plt.show()
96     else:
97         print(title)
98
99 # Test the recognition system with a new dog image
100 recognized_dog, recognized_dog_image_path, nearest_distance = recognize_dog(file_selected)
101
102 if recognized_dog == "Unknown Dog":
103     print(f"Recognized Dog: {recognized_dog} (Distance: {nearest_distance:.4f})")
104     show_image(None, "No matching dog found")
105 else:
106     print(f"Recognized Dog: {recognized_dog} (Distance: {nearest_distance:.4f})")
107     show_image(recognized_dog_image_path, f"Recognized Dog: {recognized_dog}")
```

Demo video was created

Project Result 3: Pilot activity DS4G project 5, involvement of students

Project 5 results are presented in the poster session of VU Kaunas Faculty - Prof. Vladas Gronska's International Scientific Conference, November 29, 2024

Summaries and posters are published in 19th Prof. Vladas Gronska's International Scientific Conference Abstract Book (2024), ISSN 26690233, <https://doi.org/10.15388/VGISC.2024.II>, Vilnius University, 2024

Harz University of Applied Sciences

Project Result 4: Teaching & Training Material

- **Project Outcome:**

- Development of learning and training materials accessible via Knowledge Platform
- Documents and Videos (OER)

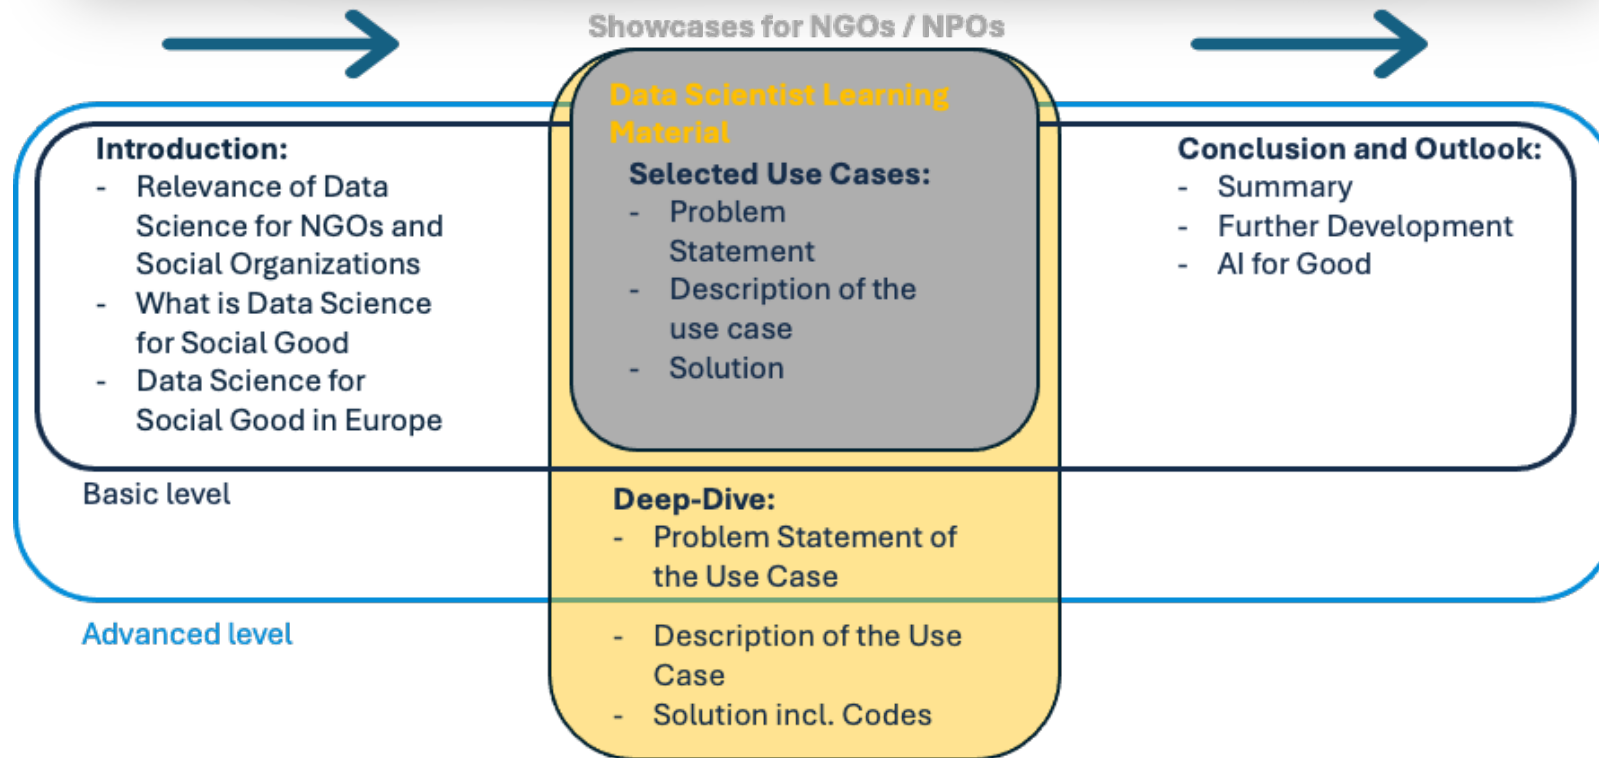

- **Needs Analysis:**

- Identification of challenges and use cases relevant to different target groups
- Knowledge from previous project results transformed into specific learning materials
- Focus areas: recruiting, project scoping, and measuring project impact

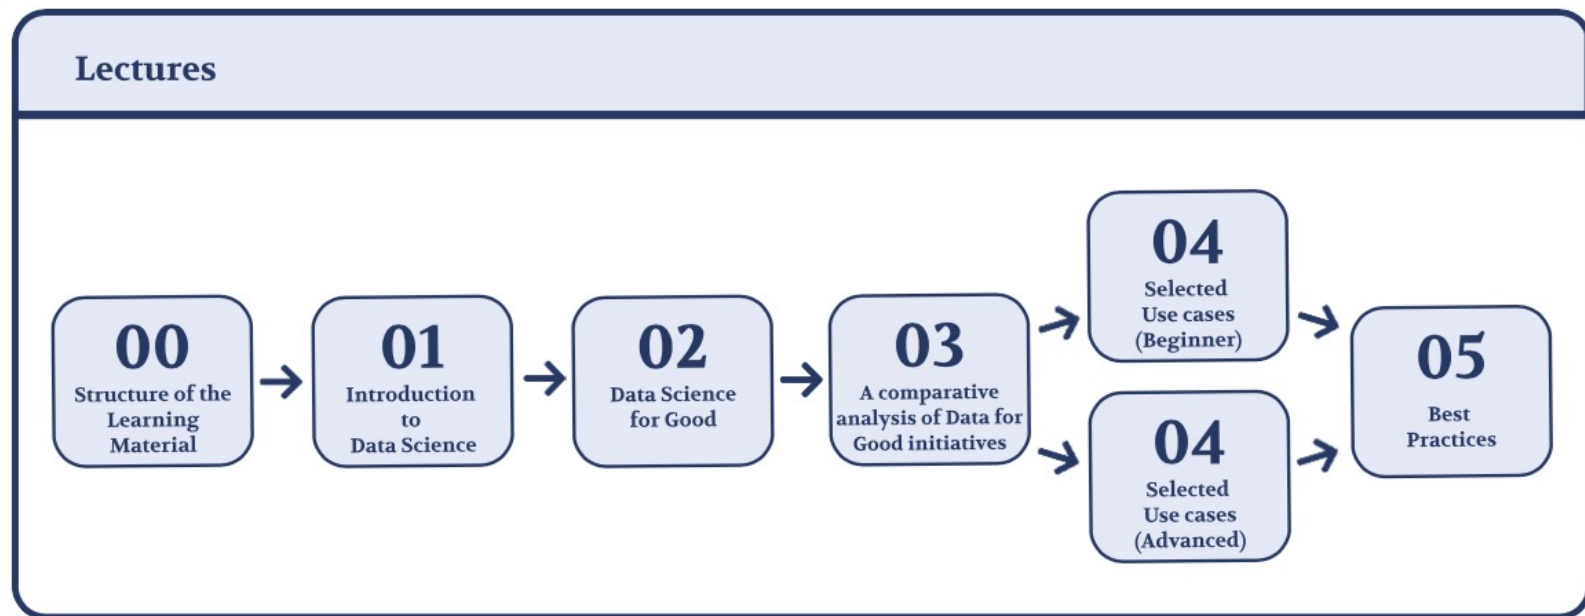

- **Target Groups:**

- 1. **Higher Education Institutions:** Learning material at different levels
- 2. **Data Enthusiasts:** Best practices for efficient organization of Data Science teams
- 3. **Social Organizations:** Insight into possible applications of Data Science

Project Result 4: Overview and Levels

Project Result 4: Structure of the Learning Material

<https://epsilon.cs.ucy.ac.cy/index.php/lectures/>

<https://www.hs-harz.de/forschung/ausgewaehlte-forschungsprojekte/epsilon/training-materials>

Project Result 4: Innovation and Impact

- **Elements of Innovation:**

- **target-group-specific** learning materials in Social Data Science, applicable across various disciplines
- addresses recruitment, project identification, and management in Data Science
- Tailored materials for Data for Good projects, merging different academic and professional backgrounds

- **Expected Impact:**

- access to relevant Data Science knowledge for higher education institutions
- Addresses **need for expert knowledge**
- filling the gap in tailored learning content for different disciplines and academic levels

Project Result 4: Process and Transferability

Process - Agile Project Management Framework

1. **Understand:** Analyze challenges and needs
2. **Create:** drafts of teaching material and didactical concepts
3. **Test:** Test drafts with German data scientists and students to gather feedback
4. **Amend:** Revise materials based on feedback
5. **Apply:** Deploy revised materials at LLTA2 event
6. **Finalize:** Refine materials using feedback from the application phase

Transferability Potential: Learning materials applicable to various higher education programs in fields linked to Data Science (e.g., social science, mathematics, computer science, design)
